VPI CASING FILLER

VPI CASING FILLER is a combination of inert gas and vapor phase inhibitor. This unique patented process removes oxygen, neutralizes water and prevents corrosion on pipes in the annular space of pipeline casings. The process features a product that is:

- *WAX, GREASE & GEL FREE*
- *NON TOXIC*
- *ENVIRONMENTALLY SAFE*
- *INEXPENSIVE*
- *IN COMPLIANCE WITH DOT REGULATIONS*

There is no "messy" cleanup when the job is complete or if the casing is ever removed. There is no possibility for toxics to leach into the surrounding soil. The process is designed to quickly and accurately fill the annular space with the proper amount of material. In addition to these benefits, this product and the process offers substantial cost savings compared to alternative casing fillers currently available.

For your next casing project consider **VPI CASING FILLER!**
