

Centralizer Size	Actual centralizer OD	Recommended Hole Size
6"	5"	5-7/8" to 8"
8"	7"	7-7/8" to 10"
10"	9"	9-7/8" to 12"

### BENEFITS

- Saves money by reducing installation time.
- Centers anode in groundbed hole.
- Maintains proper spacing between anode and non-conductive vent pipe.
- Increases anode lifetime by ensuring backfill coverage on total anode surface area.
- Solid, sturdy construction prevents bending or breakage during installation.
- Smooth, round surfaces guide anode and vent pipe down the hole.
- A cordless drill or screwdriver quickly tightens clamps around both the vent pipe and the anode.
- The entire anode and vent pipe assembly can then be easily fed down the groundbed hole.
