

TC[®] 2025-1

Rockshield

TC 2025-1 Rockshield is the ideal protection where pipeline coatings are subjected to rocky terrain, mountain handling, excessive abrasion and damaging backfills. This easy applied Tapecoat product cushions pipelines against abrasion, impact and penetration, so protective coatings remain intact to fight corrosion.

This protective material consists of a closed cell polyethylene foam substrate and a layer of polyethylene film backing which are bonded together during a hot extrusion laminating process.

Tapecoat Rockshield provides superior performance and is only 25% of the weight of conventional rockshields. By readily conforming to the pipe surface, it also can be easily applied by spiral, longitudinal or cigarette wrapping. The result is a fast, trouble-free installation with a minimum of labor and equipment. TC 2025-1 is also available with a perforated or solid material in approximately 30" diameter rolls.

Assure extra protection for buried pipelines
with the Tapecoat TC 2025-1 Rockshield.
